

ARASU PPC

Arasu PPC is the higher fineness providing cement with good ultimate strength. This improves the workability and has reduced the water-cement ratio. Arasu PPC has increased resistance to chloride, sulphate and alkali attack. There is always a Long-term strength gain with Arasu PPC which also reduces the shrinkage and swelling.

ARASU OPC

Arasu OPC has improved workability and reduced water-cement ratio. The fastest earlier strength development of the cement provides impermeability and denser concrete. Arasu OPC has low chloride content which prevents corrosion and improves the bondage of concrete to steel.

VALIMAI PPC

Valimai PPC is the ultra fineness providing cement with high early strength. It provides improved workability, durability and enhanced compressive strength. It has low heat of hydration. Valimai PPC also has reduced shrinkage and swelling with increased resistance to chloride, sulphate and alkali attack.

VALIMAI OPC

Valimai OPC is the high fineness providing cement for fast strength development at all stages. This improves the workability and reduces the water cement ratio. Valimai OPC has low chloride content which prevents corrosion and improves the bondage of concrete to steel. This cement is more resistant to heat.
